

DEPARTMENT FOR FRUIT-GROWING

The foundation of every successful and long-term sustainable fruit production is healthy, certified, and virus-free planting material. Within the Agricultural Institute Osijek, the Department for Fruit-Growing nurtures a long tradition of research and preservation of fruit species in the Republic of Croatia. Thanks to extensive experience, expert staff, and the continuous development of modern technologies, a mother orchard has been established on 3 hectares, fully compliant with the certification scheme and EPPO protocol. This orchard ensures top-quality reproductive material intended for nursery production. On an annual basis, we produce more than 1,000,000 certified buds, with the entire process subject to regular laboratory testing for viruses and other pathogens. This guarantees the highest level of plant health, authenticity, and quality.

By choosing our buds, you receive:

- ✓ virus-free certified material
- ✓ guaranteed authenticity and health safety
- ✓ high graft take percentage
- ✓ a reliable foundation for competitive and sustainable production

The image shows a greenhouse filled with rows of plants. In the foreground, there is a close-up of green, serrated leaves. The background shows the structure of the greenhouse with black plastic covering the rows of plants. The text "OUR VARIETY OFFER" is overlaid in the center.

OUR VARIETY OFFER

Preservation of Indigenous Varieties

In addition to modern licensed cultivars, we pay special attention to the preservation of indigenous fruit varieties of the Republic of Croatia. They represent a valuable genetic resource and an important part of our natural heritage.

Your success begins with the right choice!
